

NEURO-MOD STUDY

Neuroplasticity with Motor Development

Help us learn about how movement therapy and brain stimulation may support recovery after an early brain injury.

WHO CAN PARTICIPATE?

Babies who are 8-24 months old with a history of early brain injury and diagnosis of hemiplegia, accompanied by a parent/legal guardian.

Families receive up to \$150 for participation.

WHY?

Our goal is to better understand the changes in babies' brains who participate in Constrained Induced Movement Therapy (CIMT) paired with non-invasive brain stimulation.

We aim to inform future therapies and treatments.

WHERE?

Waisman Center
1500 Highland Ave, Madison WI
